

# AADLAN - Lignocaine Hydrochloride 1% Injection

## Composition w/v

Lignocaine Hydrochloride I.P 1% w/v

Water for Injection I.P q.s

## Dosage form

Solution

## Category

Anesthetic

## Description

An anesthesia of choice for cataract extraction.

A primary anesthetic with a number of benefits manufactured specially for ocular anesthesia intracamerally.

## Benefits of AADLAN

Eliminates the need of IV sedation.

Dramatically deeper depth of anesthesia.

Eliminates the blocks and their potential complications while providing comparable anesthesia.

Has much greater effect. No evidence of toxicity and no loss of endothelial cell count.

A greater patient acceptance.

## Indications

An Anesthesia of choice in variety of ocular procedure like cataract extraction, iridectomies. Secondary IOL procedure and other combined procedures.

## Contraindications

Should not be used in complicated cataract/glaucoma case. Not indicated in patients with whom surgeon cannot communicate. This technique is not to be used in paediatric cases.

## Procedure, Dosage

Initially to use an eye drop like topical anesthetic Paracain (Proparacain HCL) before the incision and then proceed with using 0.5ml 1% AADLAN ampoules.

## Caution

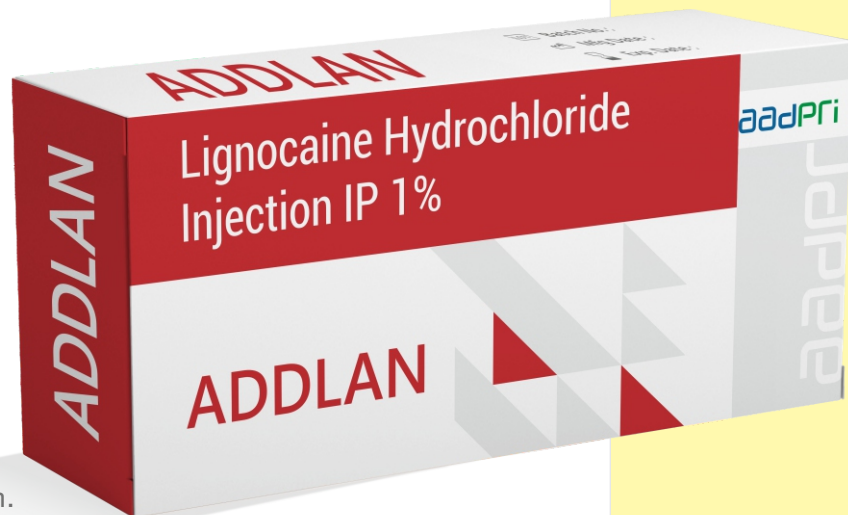

To be administered after a test dose with adequate precaution to cope with any adverse reaction.

## Storage

Store in a cool dry place. Protect from light.

## Presentation

AADLAN is available in 1 ml x 3 ampoules.
