

# IRIS RETRACTOR

Iris Care (Mechanical Intra Operative Pupil dilators) is a vital instrument to reduce surgical time and frustration during small pupil phacoemulsification, retina and vitreous surgery. These flexible nylon hooks retract the iris with minimal damage to the tissue thereby providing a fast and simple method for temporary pupil enlargement.

Set of 5 sterile Iris Retractors

Iris Retractors (also known as Iris Hooks) are used when a patient has Non-dilating / Non-fully dilating, or inoperative floppy iris syndrome. Iris hooks are considered the optimal temporary implants for such conditions. These highly effective iris hooks can be used when pharmacological dilation is unsuccessful. By helping to maintain a safe pupillary diameter, iris hooks are, in many cases, invaluable devices for cataract surgery.

The flexible Iris Retractor enables the mechanical dilation of the pupil where dilation can not be achieved pharmacologically. It is a simple, safe and fast alternative to reduce the surgical time. The flexible Iris Retractor stretches and retains the iris for maximum visibility during surgical procedures like phacoemulsification, retina and vitreous surgery. It can be safely used in aphakic, pseudophakic and phakic eyes.
